

ABSTRACT

There is provided an auxiliary cover which can improve the operability at the time of issuing liquid from a pump dispenser. The auxiliary cover for a pump dispenser which is attached on the pump dispenser for issuing liquid in a vessel with an upward and downward movement of the nozzle head and which has a function of pressing the nozzle head in a downward direction with a lever portion, wherein the cover can be attached on a cap of the pump dispenser. The auxiliary cover for this pump dispenser has a hollow-shaped base portion and is rotatably provided on the base portion via a hinge. The auxiliary cover presses the nozzle head in a downward direction with the rotation of the lever portion.
